FARAZ FARTAK

General catalogue For Products

About Us:

Fidar Faraz Fartak is a leading engineering company based in Iran specializing in industrial **compressed air systems**, **Compressed air equipments**, and **PSA based nitrogen and oxygen generator packages**. With years of experience and a commitment to innovation, we deliver reliable, energy-efficient equipment and full technical support for industries across the world.

Screw Oil injected Air Compressors:

Fidar Faraz Fartak designs and manufactures a full range of high-performance screw air compressors engineered for efficiency, durability, and reliability. Our product line includes **belt-driven, direct-coupled, and permanent-magnet motor (PM) models, with both single and double stage airend units**, each developed to meet diverse industrial requirements. Every model can be equipped with a Variable Speed Drive (VSD) system, delivering significant energy savings and stable air output under varying load conditions. With advanced engineering, precision assembly, and dust protection up to **IP50**, our compressors offer dependable operation and long service life for a wide range of industries.

Screw Oil injected Air Compressors Specs:

Fidar compressors deliver powerful performance and superior reliability across a wide range of industrial applications. Covering capacities from **5.5 KW up to 315 KW, with working pressures of 8, 10 and 13 bar**. Backed by our in-house engineering and design team, **Fidar Faraz Fartak** provides custom-built compressor systems tailored to meet the unique requirements of every client, ensuring optimal performance, energy savings, and long-term dependability.

Pressure Vessels:

- Fidar Faraz Fartak designs and manufactures high-quality pressure vessels. Each vessel is engineered and fabricated using traceable, certified steel sheets to ensure maximum safety, durability, and performance.
- All surfaces are sand-blasted prior to coating for optimal adhesion and corrosion protection. Internal surfaces are coated with epoxy paint and external surfaces with anti-corrosive oil-based coating, both applied with thickness tailored to the vessel's operating environment.
- Fidar employs the mix welding, back welding and Submerged Arc Welding (SAW) process for superior weld integrity. During production, **VT (Visual Test) and PT (Pressure Test) inspections are conducted, followed by a complete hydrostatic test upon completion. UT (Ultrasonic Test) and RT (Radiographic Test)** can also be performed upon customer request.

Pressure boosters up to 40 bar:

Pressure booster units are designed to increase inlet pressure from 7–13 bar up to 40 bar, providing reliable and efficient performance across a wide range of industrial applications.

Specifications:

- Belt and pulley drive system for smooth and reliable operation Specially designed cast iron pulleys for durability and optimal power transfer.
- Easy belt tension adjustment system for simplified maintenance Splash lubrication system (finger type) ensuring proper lubrication and long service life
- High-strength cast iron crankshaft for superior mechanical stability
- Automatic condensate drain system for efficient moisture removal
- Long-life bearings designed for continuous industrial operation
- Air intake filter with silencer for reduced noise and clean air suction
- Oil level indicator for easy visual monitoring of lubrication status

•Safety Systems:

- Inlet air control system for optimized airflow management
-
- High-pressure cut-off system to ensure operational safety
-
- Non-return valve between booster and receiver tank for cylinder head protection
-
- Protective perforated guard for pulleys and belts to ensure operator safety
-
- Manual drain valve for easy condensate discharge
-
- High-pressure gauge (manometer) for precise pressure monitoring
-
- Safety relief valve to prevent over pressure conditions

Desiccant Dryers:

Desiccant air dryers are designed to remove the moisture generated during air compression by using the adsorption process. The adsorbent materials used in these systems are selected based on the required dew point, which can be designed **from $-10\text{ }^{\circ}\text{C}$ down to $-70\text{ }^{\circ}\text{C}$** depending on the application. These dryers are engineered to deliver ultra-dry and clean compressed air, making them ideal for industries where air purity is critical, such as pharmaceutical, food, chemical, and electronics sectors.

Types Of desiccant Dryers:

Desiccant air dryers are generally classified into two main categories: Heatless and Heated types. Each type offers specific features, advantages, and limitations, and the selection depends on operating conditions, budget, and air quality requirements

- **Heatless Desiccant Dryers** use a portion of the dried compressed air to regenerate the desiccant material. They feature simple construction, low initial cost, and minimal power consumption, making them a cost-effective choice for small to medium compressed air systems.
- **Heated Desiccant Dryers** use heated air for desiccant regeneration, resulting in higher efficiency and reduced purge air consumption. The regeneration process is performed using warm airflow provided by an electric heater, ensuring reliable operation for large-scale or critical applications.

Fidar Faraz Fartak dryers capacity and dew point:

- Nominal flow rate: from **$1\text{ Nm}^3/\text{min}$ up to $100\text{ Nm}^3/\text{min}$**
- Maximum inlet air temperature: 65°C
- Achievable outlet dew point: down to -70°C , in compliance with ISO 8573 – Class 1.1.1
- Equipped with an activated carbon tower for the removal of oil aerosols and vapors down to 0.003 micron .
- Precise capacity calculation performed based on FAD (Free Air Delivery), operating pressure, temperature, and duty cycle

Carbon Tower:

All Fidar Faraz Fartak desiccant air dryer models are equipped with an additional Activated Carbon Tower stage. This unit plays a crucial role in pre-filtration, removing oil vapors, unpleasant odors, and Volatile Organic Compounds (VOCs) from the compressed air before it enters the dryer. By ensuring the elimination of these contaminants, the activated carbon tower protects the desiccant material from degradation and helps maintain the highest air purity and dew point performance of the system.

What is Nitrogen ?

- Nitrogen belongs to Group 15 of the periodic table and is represented by the chemical symbol N_2
- Nitrogen constitutes approximately 78% of the Earth's atmosphere
- It is found in all living cells
- It forms important compounds such as ammonia, amino acids, nitric acid, and cyanides
- It is a colorless, odorless, tasteless, and non-flammable gas

From air to Nitrogen !!!

The nitrogen generation process in this system involves compressing ambient air, drying and moisture absorption, multi-stage purification, oxygen separation in PSA towers, and final storage in a buffer tank. This process operates fully automatically and continuously, ensuring the delivery of nitrogen gas with stable purity and pressure for industrial applications. The technology comprises a set of devices and auxiliary equipment, which are utilized as follows:

The PSA system consists of a set of adsorption towers containing molecular sieves, an automatic control panel, a nitrogen analyzer, a buffer tank, and multi-stage filters. These components operate in a coordinated and controlled manner, ensuring a continuous and stable production of high-purity nitrogen.

Pre size 3.1 angstrom

O_2 Molecule 2.9 Å

N_2 Molecule 3.1 Å

Inlet dew point		Ambient temp	Relative Humidity	Inlet Air Quality	Inlet Compressed air flow
Refrigerant Dryer	Desiccant Dryer	25°C	≤ 80%	1.4.1	Based on design capacity, installed location and purity needed
+3°C for purities lower than 99.5%	-40° C for purities higher than 99.5%				

PSA Packages Capacity :

The nitrogen generation packages manufactured by Fidar Faraz Fartak are designed and produced with capacities ranging from **1 m³/hr to 1120 m³/hr** and purities from **95% to 99.999%**. In addition, custom designs can be provided to meet the specific requirements of various industrial projects.
